

MultiTouch

Company Profile

The Company

MultiTouch Ltd manufactures table- and wall-sized multitouch displays. Multiple users can use displays with their both hands simultaneously.

While the number of touchscreen users is growing exponentially, MultiTouch's goal is to provide the most important solutions for large multitouch systems.

MultiTouch displays are used in more than 40 countries around the world. They are used in a range of markets such as retail business, advertising, exhibitions, museums, education and design.

The products are sold directly and through MultiTouch global partner network.

MultiTouch Ltd's headquarter is located in Helsinki, Finland. Other offices are in the USA, in New York and Santa Clara, California. The company was founded in 2007 and is privately held.

The Displays

MultiTouch LCDs and back projection displays are based on the most advanced multitouch technology commercially available.

While other multitouch techniques merely see points of contact, MultiTouch technology identifies both hands. That makes a clear difference to dual- and single-touch displays allowing the client to implement remarkably richer set of interactions. It also allows the client to track multiple users even if they interact close to – or reach across – one another. That is crucial in large scale installations.

MultiTouch Full HD LCDs are modular, stackable and movable. They work equally well as table or wall displays.

The company develops technology to work across all the major platforms. It works natively on a range of Windows, Mac OS X and Linux operating systems.

The displays work in daylight, at night and when the light changes from day to night.

The LCDs are durable. Their expected lifetime is up to 60 000 hours.

The Products

MultiTouch Cell Advanced
New slimmer and lighter LCD

MultiTouch Cell
The first multitouch LCD in the world

MultiTouch Box
Back-projection box for large seamless displays of any size

MultiTouch Cornerstone
Powerful software architecture and a SDK
